Jet Opto reshapes future cabin experience by integrating sensing tech with iCLED series

Jet Optoelectronics Co., Ltd. participate 2024 AMPA, this year we have highlighted products with Amazon OTT Fire TV systems \ factory-installed dash cams with automotive grade \ ADAS (advanced driver assistance system) products \ smart cockpit and smart energy solution \ automotive and motorcycle related products with our own brand Vigorplus+. We are making the transition to smarter operating system-based systems to allow drivers and passengers to better integrate and utilize information and data. We also added new features to make our systems communicate with mobile devices and the internet. All we are to enable drivers and passengers have better integrate and utilize resources in the car, enjoy the entertainment, enhance the better driving experience.

The "SMART COCKPIT" that debuted this year combines the strengths of JET OPTOELECTRONIC, optimizes the integration of the application of the vehicle video system, and increases the quality of the car's audio-visual entertainment system. It combines the rear-seat entertainment system of the American car models which currently on sale, Panasonic OEM DVR to Toyota Group in Japan, and electronic rearview mirror for the aftermarket. We mainly combine the side electronic rearview mirror screens on both sides of the LCD instrument panel to reduce the delay of visual movement recognition; in addition, the audio-visual screens in the front passenger seat have also become one of the options of luxury car manufacturers recently. Through the exhibition of the smart simulated cockpit, domestic and foreign buyers who come to visit can quickly and clearly understand the strength and integration capabilities of JET OPTOELECTRONIC in the development of automotive electronic systems, then create and bring the greatest commercial value.

Another highlight is rear-seat entertainment systems for American automakers with Amazon Fire TV certified. JET OPTOELECTRONIC is currently one of the two manufacturers in the world that cooperates with Amazon to introduce Fire TV systems for cars. In order to provide a better experience, we have greatly optimized the Fire TV interface to make it more suitable for use in the car, allowing passengers to watch various OTT video streaming services more quickly and easily in the car such as Amazon Prime, Netflix, Disney+, and YouTube.....

Our own-brand, Vigorplus+, has very well performance in the aftermarket in Taiwan 、 Japan 、 Australia 、 Europe 、 APAC as well and even enter Southeast Asian market and globally. Continuing the word of mouth brought by V263, the new upgraded DVR will be launched in Q2; with 4K ultra-high image quality and SONY Starvis2 sensor, to improve the night driving recording quality. With the specific APP through WIFI to bring us advanced quality of us.

Jet Opto enter the automotive smart energy management system service market in 2024, providing the customers with customization services and comprehensive charging station management analysis and solution. The flexible structure and integration API development provide efficient operation backend support for various types of charging stations, easily manage charging piles and optimize utilization, so that each charging pile can maximize its efficiency.
